Board AI Program

Five steps that prepare the supervisory board to oversee, challenge and assure the AI transformation.

How does a supervisory board prepare to oversee AI?

The steps

1. **Personal AI Fluency Diagnostic** · Individual diagnostic; coming soon
   How fluent am I, as a user and as a leader?
2. **Board briefing** · 2 hours
   What should the board oversee, and what can it expect from management?
3. **The agentic experience** · Half day, hands-on
   What can AI actually do, experienced first-hand?
4. **Masterclass AI governance** · 1 day
   How do we govern AI safely, compliantly and for value?
5. **Future foresight workshop** · Half day
   What comes after this wave, and how do we stay resilient?

What your board has at the end

- Directors with personal, first-hand experience of AI
- A shared view of the board's oversight role, and of what to expect from management
- Governance structures for oversight, assurance and control of AI
- A long-term view that keeps the board's choices resilient

Why this sequence

The sequence starts with each director's own fluency, because a board oversees better what its members have tried themselves. The board briefing then sets out the board's oversight role and what to expect from management.

The agentic experience turns that understanding into first-hand experience. The governance masterclass builds the structures for oversight, assurance and control, and the future foresight workshop looks beyond the current wave, so the board's choices hold over time.

How it can be tailored

Every step can be booked on its own. After the fluency diagnostic, steps can be merged, reordered or skipped to fit what the board already knows and the time it has.

How to book

Request this path at grow.studio/contact, or email jaco@grow.studio.

Steps can be agreed individually. Delivery, availability and pricing are confirmed in the proposal.
