Deep-dive diagnostic

Interviews with a target of 15 respondents explain why you are where you are, and what exactly should change.

> Why are we where we are, and what exactly should change?

Who it is for

- Executive team
- Target: 15 respondents

What you leave with

- A finer-grained picture of the dimensions that matter most for your company
- The underlying causes behind the diagnostic's signals, tested in interviews
- Detailed strategic and practical advice, specific to your situation

Format

Duration	Scoped per engagement
Format	Face-to-face interviews
Audience	Executive team
Delivery	Location, language and remote suitability agreed per engagement.
Group size	Target: 15 respondents
Language	Agreed per engagement
Price	Tailored proposal

About

Usually following the AI strategy diagnostic, the deep-dive diagnostic examines selected dimensions further by interviewing a target of 15 respondents. The result is a finer-grained picture of where you stand, and more detailed and relevant strategic and practical advice. The interviews are typically conducted by industry specialists we partner with.

The process

1. **Scope.** We agree the dimensions to examine and the leaders to interview, usually from the AI strategy diagnostic's results.
2. **Interviews.** Industry specialists interview a target of 15 respondents.
3. **Analysis.** We test assumptions against what the interviews show, and develop recommendations.
4. **Findings and advice.** We present the findings and the advice to the executive team.

What you receive

- Professional PDF report
- A detailed status picture of the selected dimensions
- Strategic and practical recommendations
- A proposed sequence of next steps

Interviews are confidential. An NDA is available on request.

How it works

1. **Before.** The AI strategy diagnostic usually comes first. We agree the scope and the interviewees.
2. **The session.** Interviews with a target of 15 respondents, on-site or remote.
3. **After.** Findings and advice, presented to the executive team, with a proposal for what comes next.
